

SAMM

Samana Advanced Management & Monitoring Platform

Paying too much for monitoring tools that only show part of the picture?

Drowning in alerts your team no longer pays attention to?

Struggling to pinpoint issues across siloed systems—and losing time, money, and control in the process?

Today's IT teams face a **growing challenge**: noisy, fragmented, expensive monitoring solutions that overpromise and underdeliver. Traditional tools generate alert fatigue, require multiple platforms to see the full environment, and often degrade performance with required agents.

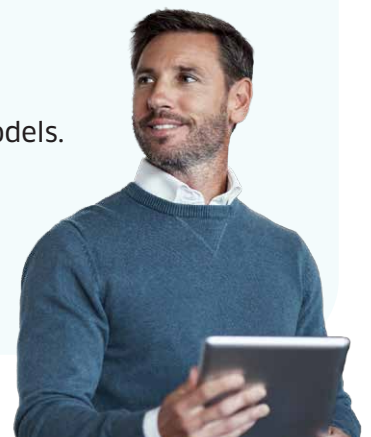

SAMM was created with direct input from the professionals who manage and maintain IT environments every day.

A single, vendor-agnostic, agentless monitoring solution designed to give you end-to-end visibility—without the noise, complexity, or inflated price tag.

Through our proprietary monitoring solution, Samana delivers **an efficient, scalable, and cost-effective approach** to real-time monitoring, triage, and proactive support. It is one of the key differentiators that sets Samana apart in providing best-in-class IT Managed Services and is now available to our customers directly with our **SAMM as a Service** offering.

Features

- Comprehensive, agentless monitoring solution.
- End-to-end visibility across diverse technologies.
- Innovative roadmap including Machine Learning and updated licensing models.
- Vendor-agnostic design supporting a wide range of use cases.
- Real-time and historical reporting, including alerting and health checks.
- Scalable, secure architecture built to grow with your organization.
- Extensible and customizable to fit unique customer requirements.

SAMM bridges a critical gap and provides you with the metrics and insights that matter most.

Infrastructure

- Windows Machine Monitoring
- ITSM Integration

Platform

- On-Premise (Virtual Machine Platforms)
- Cloud Resources (AWS, Azure)
- Hypervisors (XenServer, VMWare, Nutanix)

Database

- MS-SQL, MySQL, MariaDB, Oracle

End User Computing

- Citrix Virtual Apps and Desktops
- Citrix NetScaler
- AWS AppStream and Workspaces
- Omnisia (Coming Soon)

Security

- Okta

Network

- SNMP and Syslog
- Networking Infrastructure

Interested in a dashboard that you don't see on the list?

Inquire today as we have an aggressive roadmap and are always adding new technologies to the solution.

Customer Success Stories

AWS Fleet Availability

"SAMM's fleet availability dashboards helped our team respond quickly to maintain uptime for a large hospitality customer—without unnecessary spend."

Faster Root-Cause Identification

"SAMM's domain controller latency monitoring enabled rapid diagnosis of reported login issues."

Preventing Outages

"SAMM's historical usage reporting allows our team to identify anomalies early, proactively resolve issues, and prevent service disruptions."

Ready to take control of your network?
